Material: PVC plastic

Sizes and weights are nominal figures from the maker's data, and individual parts vary a little. Check the parts in your hand before cutting tube. Not for use as building or construction scaffolding. The strength of a structure depends on the fittings, tube and fixings chosen and on what it is fixed to. Choosing the right size and type of fitting for the job is the customer's responsibility. If in doubt, ask us. A dash means the foundry gives no figure for that size.
